	<p>For the purposes of this Chapter, a "chemical reaction" is a process (including a biochemical process) that results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of atoms in a molecule.</p> <p>The following are not considered to be chemical reactions for the purposes of this definition.</p> <p>(a) dissolving in water or other solvents;</p> <p>(b) the elimination of solvents, including solvent water; or</p> <p>(c) the addition or elimination of water of crystallization.</p> <p>For the purposes of heading 27.10, the following processes confer origin:</p> <p>(a) Atmospheric distillation: A separation process in which petroleum oils are converted, in a distillation tower, into fractions according to boiling point and the vapor then condensed into different liquefied fractions.</p> <p>(b) Vacuum distillation: Distillation at a pressure below atmospheric but not so low that it would be classed as molecular distillation.</p>
